## USED Metal Waste Receptacles For Sale

We replaced some Victor Stanley receptacles in City of Palo Alto this past summer and we had to haul away their old existing receptacles as part of our contract. Now we have these receptacles that are in good working condition and too good to just throw away.

We would like to sell them in minimum quantities of approximately 10 units. We have flatbed delivery trucks and can make delivery on our own trucks to your corp yard facility. We could have them strapped down to pallets at slight additional charge, but they would normally be delivered right off truck trailer.

Please contact us with your best offer and quantity desired. Delivery charge depends on quantity and location.

## USED Metal Waste Receptacles For Sale

Receptacles are all green in color and are in working condition. The majority of the receptacles are top-opening units, and only 4-5 of them are larger side-opening units. We will be washing them but delivering them in “as is” condition. The receptacles are located in our Redding yard if you want to take the trek to view them.

Black plastic inside liners can be provided for an additional cost of \$30 each.

Please let us know what quantity of units you are interested in and what price you are proposing. We are trying to move these units out of our facility before winter comes, and will be selling to highest bidders.
